

## Installing Jupyter Notebook:

You can use any IDE of your choice however, we recommend using Jupyter Notebook. Jupyter Notebook can easily be launched using the Anaconda Navigator.

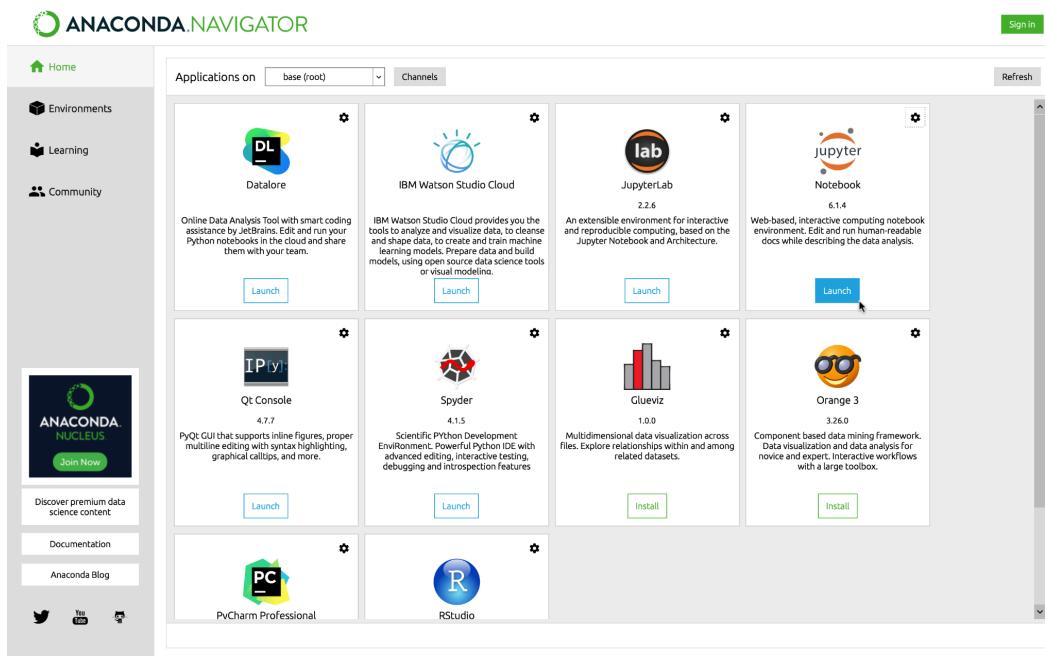

1. Go to <https://www.anaconda.com/products/individual>. At the bottom of the page, you will see the download options.

2. Install the downloaded Anaconda on your computer.

### 3. After downloading, run **Anaconda Navigator** and select **Jupyter Notebook**.

### 4. You can start Python programming by creating a new notebook.
